

Hi! I am founder, editor and sole author of a web portal interested in UFO phenomenon as part of a much greater picture called the Universe. I will mention my portal name and place a link at the end of this e-mail to avoid possible advertising issue since real purpose of this contact is to share my insights and thoughts with UFO community worldwide.

People ask if there are so many other civilizations why didn't we encounter anyone? Aside U.F.O. sightings and estimate based on the Drake equation, just the vastness of spacetime alone makes it absolutely possible for many, many other civilizations to exist but the same vastness also makes it very hard to meet them. It is like a coin with two sides: "many, many" and "very hard" meaning that extraterrestrial species we encounter will certainly differ in their appearance and technology.

I have watched a number of UFO documentaries. Last one I seen, few days ago, is about 1994. Ruwa, Zimbabwe - Ariel school UFO sighting.

We can not ignore such testimonies but to be scientifically honest we must always include sceptical angle of viewing as well. Dr. Jung calls it rumours of the psyche. However, rumours occur in individual cases. In situations like Ariel, and similar, when there is more than one observer we can move forward in our investigation with confidence. Something did happen.

Why did it happen? Because... We are not alone and we never were.

Naive statements given by authorities and their tragicomic cover-up attempts, which indirectly confirm an authenticity of an event, fool only general public while in the minds of dedicated researchers wake more suspicion than before official reaction was released. For example, watch how Harold Brown, 14th US secretary of defense, looks down when saying "we don't hide anything" or how Joe Biden scratch his nose when saying "slow moving objects". Obviously, selected officials are not familiar with a body language.

Don't forget, beside UFO there is also USO phenomenon (Unidentified Submerged Object) which is less familiar than its aerial equivalent. Basically, it is a same thing but occurring underwater. In specific cases, vessels can switch traveling medium (air to water and vice versa). Together with speed and maneuverability, it becomes obvious why every army and intelligence want to keep things under rags. In religious environment like planet Earth, systems of belief would collapse with fear and panic spreading globally. Elites and establishments would lose their power (strongly enforced by weak educational apparatus filled with nonsense instead solid, unquestionable facts).

Truth is undesirable, bitter tasting, oppressed.

Public opinion is created by mainstream media.

Cover news fade away in a matter of weeks.

Average minds are pleased with regular lies.

There are things we can not explain, things beyond our grasp, belonging to far away civilizations. Distant places we can only visit using our imagination or projections. What we can is hope that technologically superior cultures will not enslave or destroy us - as we did and do hither. We can just pray that aliens will be benevolent.

Cosmos may be infinite, or unreachable to humans - which is practically the same for us, and part of a series. Furthermore, reality could be fractal meaning that our understanding of an entire existence must be able to transcend beyond boundaries of currently possible.

We know so little yet we think too high of ourselves!

As mentioned at NASA public meeting on UFO study, which I thoroughly analysed and wrote an article for my web portal, DOD sensors look for signatures of propulsion and known weaponry while defense and intelligence data is not included in this particular research! What kind of science is that?

This whole group of respected scientists didn't say much. I do not question their expertise and scientific method but their purpose for which they alone state that it is "not to resolve". In the same manner as they question ability of trained military pilots with a long record of service and efforts of many civilian organizations dedicated to a UFO research.

Their equipment is provided by the US Department Of Defense. The panel works closely related with All-domain Anomaly Resolution Office (AARO) which is a government agency, just like NASA is, making them biased from the start.

Dr. Fox answered to a member question about calibration: "We are very rigorous, we are cleaning images before publication"... What if there was an unknown object slightly out of focus? They just erase it before publication? I think so.

There is much more about this meeting in my article. I also wrote an article about a book "Flying Saucers : A Modern Myth of Things Seen in the Skies" written by famous dr. C. G. Jung as well as few articles about UFO matter in general.

Efforts invested like several projects, Robertson panel, Condon Committee and M12 actually serve to hide and manipulate the truth, in order to calm the citizen population, than to deal with the core of the subject which military and intelligence agencies proceed to do but in the top secrecy mode, at the highest level of classification, deep inside underground facilities built beneath the mountains, water and ice. Even Presidents of USA, Admirals, 5 star Generals (Eisenhower), senators and congress committees were (are) often denied access to the restricted files.

We must be cautious and keep a constant watch.

Termination (closure) of the Project Blue Book chronologically corresponded to the political elections in 1969. when Richard Nixon succeeded Lyndon B. Johnson in the chair of the President of the USA. New administration don't like tail(s) from their predecessors. Obviously, politics has advantage over the truth.

A while ago, I have started working on my SCREEN Project concerning the reverse engineering of an alien spacecraft technology.

Why is it hard to spot an UFO (UAP)? There is a common side effect, mentioned by many witnesses, which is described as electromagnetic interference causing electronical equipment to seize functioning. Why do aliens use strong EM field other than to protect their vessels integrity? They use it to block the EM radiation making their spaceships invisible both to the human eye and scientific detectors provided so far. As well as to disrupt our communications and electronical systems.

There are certain areas on Earth showing huge geomagnetic disturbances, such as the Bermuda Triangle, which could be related to the UFO (UAP) mystery.

I have no money because I am unemployed. No health insurance either. I quit my job in a state service due to harassment and because I defy bureaucratic hierarchy. Besides, there was too many stupid people around verbally attacking me and excommunicating from social circles meaning I couldn't advance. I was stuck for 23 years without deserved promotion. Hence, I can't donate at this moment. I can offer my sincere collaboration.

This is link to my web site:

<https://www.captainnemesisjournal.co.uk/>

I am relabeling it into "Hu Senrai's Journal" to avoid possible confusion with comic book character named Captain Nemesis about whom I was unaware until recently. I want to keep my Journal pure and authentic, relieved of cliches and intellectual robbery.

I hope we'll stay in touch.

Sincerely,

Teo Klima

a.k.a. Hu Senrai
